7	<p>Apply Meta tags and Multimedia tags.</p> <ol style="list-style-type: none"> 1. Create a simple HTML webpage that uses basic meta tags such as description, keywords, author, and viewport. 2. Design a webpage that implements meta tags to automatically refresh after a few seconds, and specify the character encoding using the charset meta tag. 3. Develop a webpage that embeds an audio file using the <code><audio></code> tag with controls, autoplay, and loop attributes. 4. Design an HTML page that displays a video using the <code><video></code> tag with features like controls, poster image, and multiple source formats. 5. Create a webpage that demonstrates the use of <code><embed></code>, <code><object></code>, and <code><iframe></code> tags to display external multimedia content like PDFs, YouTube videos, and interactive maps.
8	<p>Demonstrate HTML5 Semantic Tags and Form Validations</p> <ol style="list-style-type: none"> 1. Create an HTML5 page using semantic tags like <code><header></code>, <code><nav></code>, <code><main></code>, <code><article></code>, <code><section></code>, and <code><footer></code> to structure the layout of a simple website. (A) 2. Develop a contact form using HTML5 form elements such as <code><input type="email"></code>, <code><input type="tel"></code>, <code><input type="date"></code>, and <code><textarea></code>. (A) 3. Create an HTML form with fields like Name, Email, and Phone Number using the required attribute to ensure the user cannot submit without filling them. (B) 4. Design a registration form that uses <code>type="email"</code>, <code>type="number"</code> and pattern attributes to validate email format, number ranges, and custom patterns (e.g., password rules). (B) <p>Create a feedback form where <code>minlength</code>, <code>maxlength</code>, <code>min</code>, and <code>max</code> attributes are used to control input length and numerical value range. (C)</p>
9	<p>Demonstrate the selectors.</p> <ol style="list-style-type: none"> 1. Create an HTML page that applies different styles using basic CSS selectors: element selector (<code>p</code>), class selector (<code>.className</code>), and ID selector (<code>#idName</code>). (A) 2. Design a webpage that applies common styles to multiple elements using the group selector (<code>h1, p</code>), universal selector (*), and descendant selector (<code>div p</code>). (B) 3. Create a webpage that shows the use of:

Subject: 2301CS202 – Web Designing

- a. Child Selector (`ul > li`)
- b. Adjacent Sibling Selector (`h2 + p`)
- c. Attribute Selector (`input[type="text"]`) to target specific elements and apply CSS rules. (C)

10 Design the given web pages using the div tag and CSS properties.

DICA

Academic Year 2025 - 26 | Semester-I

Prof. Dharmik Vasiyani

Lab Manual

The image shows a web design project. At the top, there's a navigation bar with links: Home, My Intro, Services, Pages, Contact, Enter Keyword..., Search, and a magnifying glass icon. A red box labeled 'B.' is positioned above the navigation bar. Below the navigation, a large photo of a smiling man in a black shirt is displayed. To his left, the text "Hi, I'm Mary Ateer" and "DESIGNER" is written. A small bio below says, "I love to work in UI/UX designing. I always try my best to make good UI with the best UX." A red "Hire Me" button is located to the left of the bio. Below the bio, there are logos for PayPal, Google, Samsung, Lenovo, and Amazon. On the left side of the main content area, a large number "22" is displayed above the text "Years Of Experience Working". On the right side, there are three service cards: "Creative Design" (with a lightbulb icon), "Web Design" (with a laptop icon), and "Brand Identity" (with a book icon). The background features abstract brown and purple shapes.

Part : C

Subject: 2301CS202 – Web Designing

12 **Create web pages with given animation effects**

Part: A

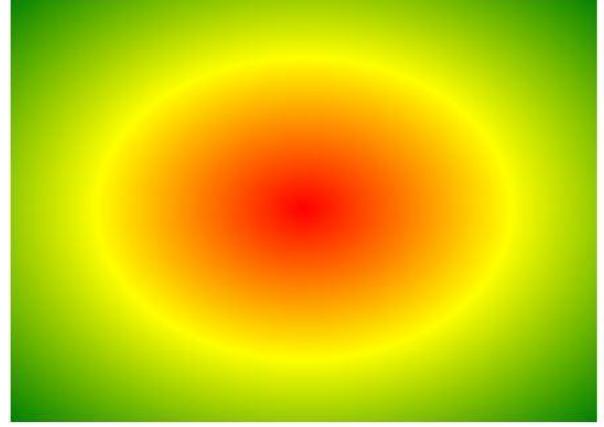

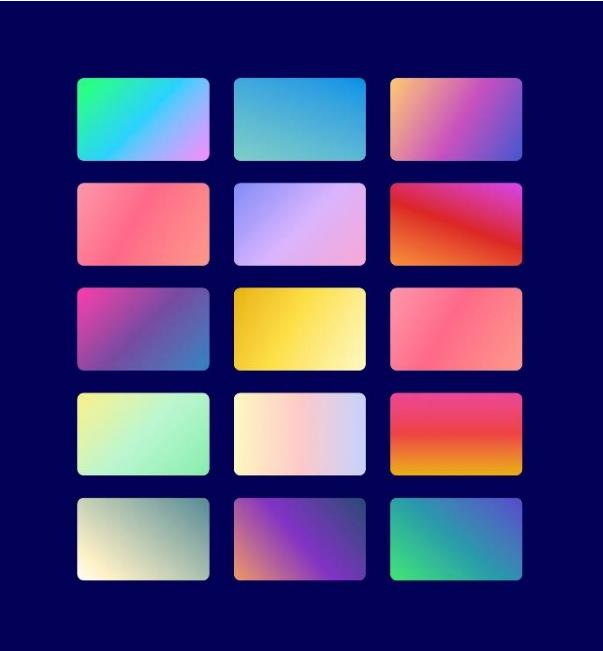

1. Changing the background color of the div from red to yellow.
2. Moving div from Left to right, right to bottom, bottom to left, and left to top.
3. Put a delay of 2s in the animation.
4. Change the animation-iteration count property of the program to run infinitely.
5. Change the animation direction property to run it in reverse order.
6. Change the value of the animation-timing-function property to change the speed of the animation

Part: B

1. Create a custom animation of your choice.

Part: C

1. Create an animation similar to the screensaver.

13	<p>Apply Media Queries on Practical No-10 and make it responsive.</p> <ol style="list-style-type: none">1. Layout part-A2. Layout part-B3. Layout part-C
14	<p>Demonstrate Gradients in CSS.</p> <p><u>Part : A</u></p>   <p><u>Part : B</u></p>  <p><u>Part : C</u></p>

15

Create a web page using pseudo-classes and pseudo-elements having given effects.

Part : A

1. Link after visited red color before visited orange color
2. Add special style(change color, font size etc.) to first line of paragraph
3. Add special style (change color, font size etc.) to first letter of paragraph
4. Change background color to yellow when user select particular text
5. Add special style to an element when user mouse over it.

Part : B

Subject: 2301CS202 – Web Designing

1. Using the :hover pseudo-class to change the appearance of links when hovered over, but limited to links within a specific container.
2. Applying styles to input fields when they receive focus using the :focus pseudo-class.
3. Utilize the :hover pseudo-class to highlight table rows when hovered over.

Part : C

1. Employing pseudo-classes such as :valid and :invalid to style form elements based on their validation status, aiding in providing feedback to users during form submission.
2. Applying pseudo-classes like :active to interactive elements such as buttons and toggles to visually indicate user interaction when activated or clicked.
3. Using pseudo-classes such as :focus to improve accessibility by indicating the currently focused element, aiding users who navigate through a website using keyboard-only inputs.

16 Build Below Homepage using HTML and CSS.
